"Separation of Amitriptyline and Nortriptyline by Thin-Layer Chromatography."

Prague, Ceskoslovenska Farmacie. Vol 16, No 1, Jan 67, pp 41-42

Abstract /Authors' English summary modified/: Amitriptyline and nortriptyline were separated on thin layer silicagel in a 40:20:5 mixture of benzene:acetone:25% ammonia. Even low amounts of nortriptyline, which is the raw material in amitriptyline preparation, can be determined by the method described. 1 Figure, 6 Western, 3 Czech references. SOURCE: Vynalezy, no. 1, 1966, 22

TOPIC TAGS: combustion, fuel, fuel injection

ABSTRACT: A device has been designed for setting a maximum injected amount of fuel for combustion engines, using various types of fuel. It contains a stop screwed into the governor housing. A knob is mounted transversally to the body of the stop. Adjustable screws for maximum injection of individual types of fuel are built into the knob.

Abstract : The work of the device is based on the measurement of electric conductivity of hygroscopic liquids, with which glass fabric is saturated. A change of its electric conductivity is recorded, when gas is passing through. The measurement accuracy is ± 0.2 to 0.5% , one measurement continues several hours.

124. PROPERTIES OF BOST CORES AS A FUNCTION OF THE
GRAIN SIZE. L. B. GOLIK.

TRANSLATED FROM RUEK 10 NO. 9 814 14 (1967) IN Czech

Measurements of permeability and losses of cores made of
several types of BOST. The powders were carried out at
various grain sizes. The powders were either of the monodispersion
dispersion, or of the polydispersion powders, having average
grain sizes of 27, 33, 56 and 88, and 6-micron dispersion powders
with grain sizes of 27, 34, 66, 75, 106 and 118 μ were investigated.
It was found that, at a given porosity, the cores of poly
dispersion had a lower losses than those of monodispersion.
Core permeability is the grain size. Optimum results are achieved
at a grain size of 40-50 μ . Dispersion powders having a large
grain size are characterized by a high loss.

TITLE: Nickel ferrites with a perminvar hysteresis loop

SOURCE: Slaboproudny obzor, v. 27, no. 1, 1966, 26-31

TOPIC TAGS: hysteresis loop, nickel compound, ferrite, cobalt compound, oxide, perminvar effect

ABSTRACT:

physical essence and conditions of the development of the perminvar effect in nickel ferrites are explained. Tests are described that had been used to verify the chemical composition of nickel ferrites with an outstanding perminvar effect, to study the influence of adding CoO, and to determine the possibilities of enhancing the value of the opening field strength. The characteristics are presented of one type of ferrite that has been developed, and recommendations are given for its application. Orig. art. has: 12 figures and 2 formulas. Three groups of rats were fed on a control diet 17% protein, 5% fats and 78% carbohydrate, a diet with high (47%) protein and low (30%) carbohydrate and one with low (7%) protein and 71% carbohydrate for 5 weeks previous to inoculation with standardized tumour emulsion. No inhibition of tumour take was observed but the growth of the tumour was slightly slower in the high protein diet and much slower in the low protein diet. The resultant size of tumour in the low protein group was much smaller than in the controls and the survival of the animals was significantly longer.

"Relationship Between the Sensitivity of Guinea Pig Ileum to Histamine and the Vitamin C Content of the Ileum."

Prague, Casopis Lekaru Ceskych, Vol 106, No 8, 24 Feb 67, pp 213 - 216

Abstract /Authors' English summary modified/: The results of experiments conducted by the authors indicate that there is no correlation between the vitamin C content and sensitivity to histamine by the ileum. Most diets used for guinea pig rearing are not satisfactory; the diet recommended by Lunde is considered best when supplemented by a standard dose of vitamin C. 3 Figures, 1 Table, 20 Western, 4 Czech, 1 USSR reference. TOPIC TAGS: military medicine, disease incidence, bacterial disease, therapeutic
medicine, tuberculosis

ABSTRACT: 29 cases of severe infections in which the life of the patient was in
danger are discussed. 22 cases were due to bacterial meningitis, 3 to tuberculous
meningitis, and 2 each to staphylococcal septicemia and streptococcal sepsis. 5 of
these patients died. The danger of tuberculosis and of relapsing bacterial meningitis
is discussed. Early diagnosis and correct therapy are required for a successful
treatment. [Based on authors' Eng. abstr.] [JPRS]

Hruban, K. The semi-infinite solid with variable modulus of elasticity. Acad. Polonaise Sci. Bull. Int. C. S. Math. Nat. 40 (1945), 131-166 (1946).

Simple radial stress solutions are obtained for the semi-infinite homogeneous isotropic solid under point loading normal to the boundary and for the plane strain case with the force at one side. Results are also given for load distributed over a circular area and a long strip. The method used is to solve the equations of elasticity by setting all stresses equal to zero except the radial. The variations of Young's modulus E with the radial coordinate r and polar angle ϕ when certain particular displacement solutions are then determined. Poisson's ratio ν_m is taken as constant and the displacement solutions chosen are those which vanish as r becomes infinite. Among the variations of E for which answers are tabulated are $E = r^m \cos(\phi)^n$, $m = n = 1$, $E = r^m \cos(\phi)^n$, $m = 3, n = 2$, $E = r^m$, $m = 2$, for plane strain.

Analysis Stroka staveblich konstrukcii. Technical Handbook, 6

(Technický Průvodce 4., Pstř., Státní Nákladová vyd. Technické

literatury, 1951, v. 1, 620 pp., 370 fig., 70 Kčs.

One of 29 volumes of the Technical Handbook, published in 7th

edition (1st ed. in 1917, 6th ed. in 1949). Due to great progress

in many fields of this subject, all sections have been carefully

revised and rewritten, especially see. II (Loading conditions,

see. III, 1 (Continuous and multiple-story frames

by Klokner), see. III, 6 (Continuous and multiple-story frames

by Hruban), and see. III, 7 (Shell structures, by Hruban).

Material has been added to many other sections of this

very thorough handbook which presents not only a compact

treatise of the most important part of structural engineering but

also various simplified methods of analysis, demonstrated by

numerical examples. Footnotes and bibliography in each section

contain valuable references.

Introductory chapter on procedures in engineering practice

and standards is written by F. Klokner. J. J. Polívka, 11th
